

Amendments to the Specification

Please replace the paragraph number 65 with the following revised paragraph:

[65] The microprocessor 416 together with an operating system operate to execute computer code or logic 410A and produce and use data 410B. The computer code or logic 410A and data 410B may reside on the RAM 420, the ROM 422, or the hard disk drive 410. The computer code or logic 410A and data 410B could also reside on a removable program medium and loaded or installed onto the computer system 400 when needed. Removable program media include, for example, CD-ROM, PC-CARD, floppy disk and magnetic tape. The logic 410A can include logic for receiving a product specification. The logic for receiving the product specification can include logic for converting the product specification from a first format to a second format. The logic 410A can also include logic for extracting the parameters from the product specification and logic for storing the parameters in a testing data file. The logic 410A can also include logic for inputting the testing data file into a test bench system and logic for testing the development device. The logic for inputting the testing data file into the test bench system can include logic for transmitting the testing data file to the test bench system via the computer network.
